

METAL CABINET MOUNT INSTALLATION

- The metal cabinet mounts are an optional accessory designed for use with mirror blades or cabinet art blades. This provides optimal support for the light bars without typical adhesion issues and eliminates the risk of the light bars pulling your art off the inside of the cabinet.
- Place the light bar between the cabinet wall and the glass channel. **DO NOT PLACE THE METAL MOUNT INSIDE OF THE GLASS CHANNEL.**
- If the cabinet mount has issues staying in place, use the included adhesive strip on the inside of the cabinet mounting bracket. Otherwise, leave the paper liner attached for easy, residue-free removal later.
- Repeat for the other side of the cabinet.
- Secure the light bar to the metal mount. Please note that your factory light bars shipped with steel-based adhesive strips on the back. When using the metal cabinet mounts, these can be pulled off and stored for potential later use.
- Due to variances in cabinet manufacturing tolerances between manufacturers, the metal brackets may not be exactly flush with the cabinet.
